

Assignment :- 4

Name : Radadiya Deval Chandubhai

Enrollment No. : 200802089

Division : E2

- Create one program in that perform following task

➔ Insert Data :

```
<form method='post'>
<center>
    Roll No. : <input type='text' name='rn'><br><br>
    Full Name : <input type='text' name='fn'><br><br>
    Email : <input type='email' name='em'><br><br>
    Contact : <input type='text' name='cn' maxlength=10><br><br>
    Address : <input type='text' name='ad'><br><br>
    <input type='submit' name='sb'>
    <input type='reset' name='rs'>
</center>
</form>
<?php
    $a=mysqli_connect('localhost','root','','student');
    if(mysqli_connect_error())
    {
        echo "error".mysqli_connect_error();
    }
    else
    {
        echo "connect";
    }
    if(isset($_POST['sb']))
    {
        $rn=$_POST['rn'];
        $fn=$_POST['fn'];
```

```

        $em=$_POST['em'];
        $cn=$_POST['cn'];
        $ad=$_POST['ad'];
        mysqli_query($a,"insert into sem4
values('','$fn','$em','$cn','$ad')");
    }
?>

```

→ Update Data :

```

<?php
    $con=new mysqli('localhost','root','','student');
    if($con->connect_error)
    {
        die("Connection failed: ".$con->connect_error);
    }
    $sql="update sem4 set rollno=5 where rollno=6";
    if ($con->query($sql)==TRUE)
    {
        echo "Record updated successfully";
    }
    else
    {
        echo "Error updating record: ".$con->error;
    }
    $con->close();
?>

```

→ Delete Data :

```

<?php
    $con=new mysqli('localhost','root','','student');
    if($con->connect_error)
    {

```

```

        die("Connection failed: ".$con->connect_error);
    }
    $sql="delete from sem4 where rollno=5";
    if ($con->query($sql)==TRUE)
    {
        echo "Record deleted successfully";
    }
    $con->close();
?>

```

→ Select Data :

```

<?php
    $con=new mysqli('localhost','root','','student');
    if($con->connect_error)
    {
        die("Connection failed: ".$con->connect_error);
    }
    $sql = "select * from sem4";
    $a=Mysqli_query($con,$sql);
    echo "<center><table class='table table-hover'>
        <tr>
            <th scope='col' class='h5'>rollno</th>
            <th scope='col' class='h5'>fullname</th>
            <th scope='col' class='h5'>email</th>
            <th scope='col' class='h5'>contact</th>
            <th scope='col' class='h5'>address</th>
        </tr>";
    while($result=mysqli_fetch_assoc($a))
    {
        echo "<tr style='font-family: Arial, Helvetica, sans-serif'>";
        echo "<td>".$result['rollno'].</td>";
        echo "<td>".$result['fullname'].</td>";
        echo "<td>".$result['email'].</td>";
        echo "<td>".$result['contact'].</td>";
        echo "<td>".$result['address'].</td>";
    }

```

```
        echo "</tr>";
    }
    $con->close();
?>
```
